

Using Conditional Access

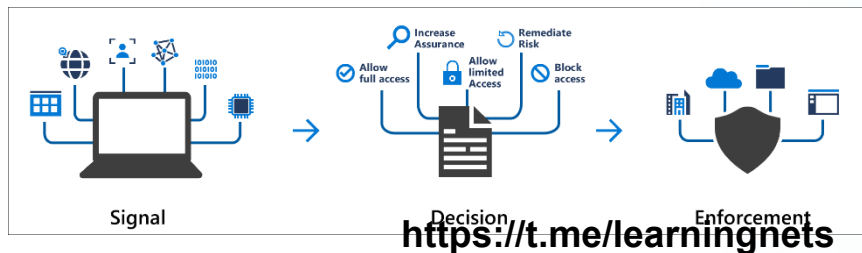

[examlabpractice.com](https://t.me/learningnets)

<https://t.me/learningnets>

What is Conditional Access?

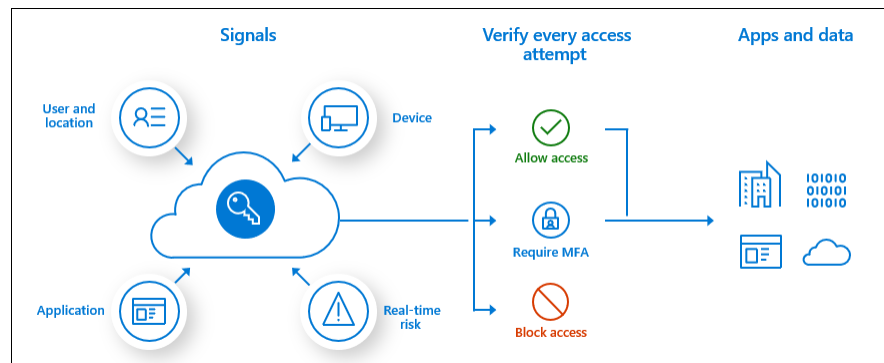

- Conditional Access is a tool in Azure that brings signals together for access decision making
- Signals help in decision making on whether to allow access or enforce certain policies

The Dilemma of Modern Administration

- Administrators today must allow users to be productive anywhere at anytime, and from a massive selection of applications
- Administrators are also expected to protect organizational data/assets all at the same time

Signals and Outcome

SIGNALS

- User or group membership
- IP Location information
- Device
- Microsoft Cloud App Security
- Application
- Real-time and calculated risk detection

DECISIONS

- Block Access
- Grant Access
 - Require MFA
 - Compliant Device
 - Require Hybrid Azure AD Joined
 - Require Approved App
