

## Installing EVE-NG Client Pack:

EVE-NG Windows client pack installs everything necessary for working on/building labs on EVE-NG. It includes Wireshark installation, UltraVNC installation, PuTTY (used as default Telnet client), Plink (for Wireshark), and all necessary wrappers. Also, it will modify Windows registry files for proper work. First, you need to download the client pack to your PC from <https://mega.nz/file/G5liXYzK#oaSC1Jrh5m0HaNkReirurtrXhIHGw6NOZX3jgus1xqo>

### Windows Client Side

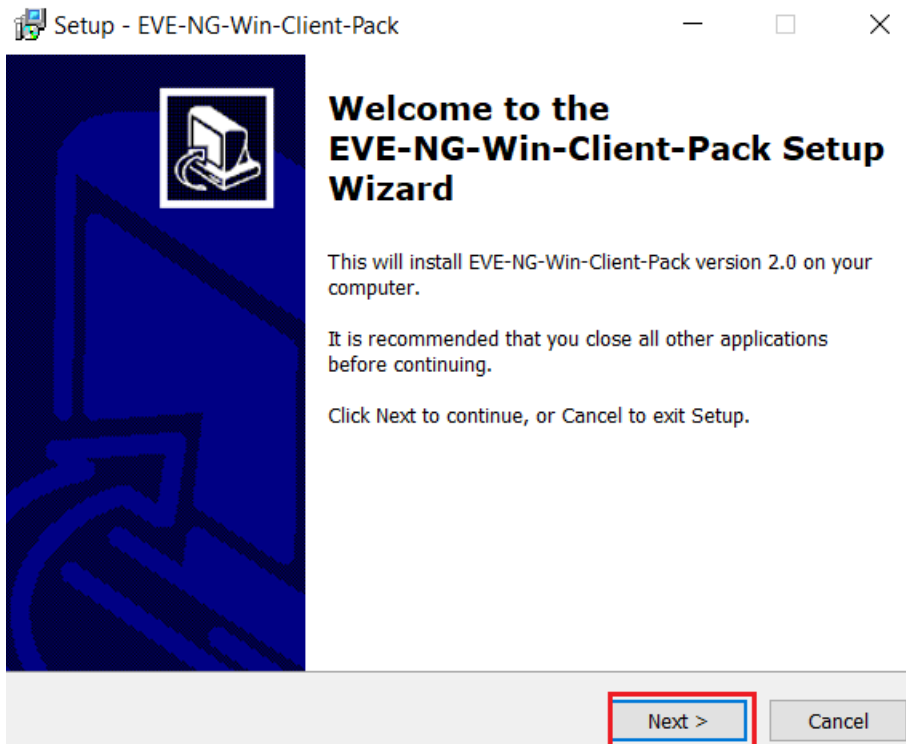

Below one can find a Windows client side pack that will install everything necessary for running telnet, vnc, wireshark, rdp applications when working on/building labs on EVE-NGIt includes:

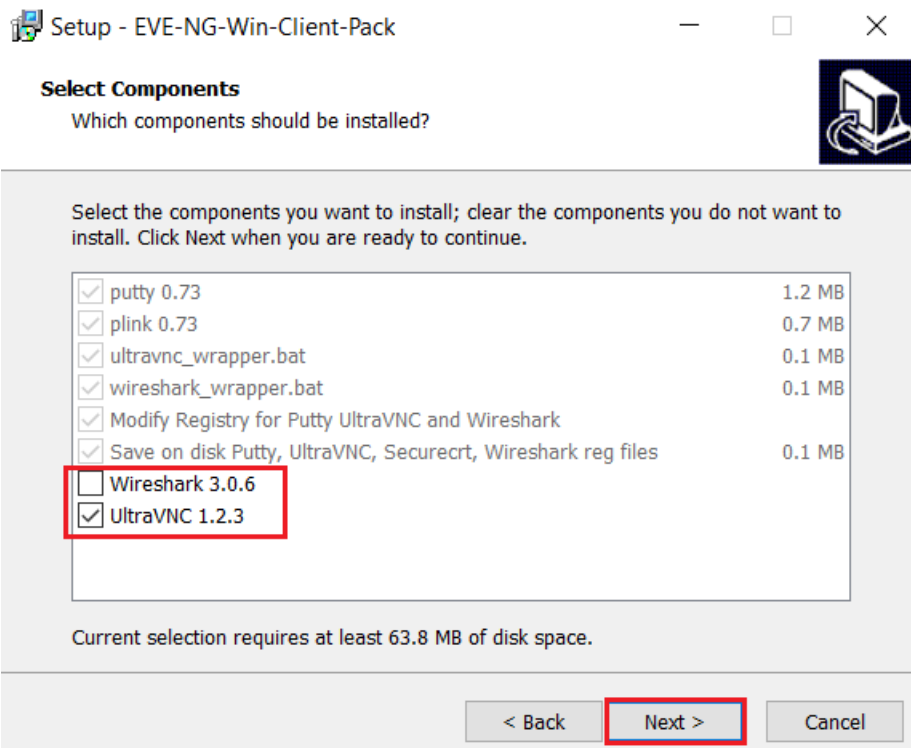

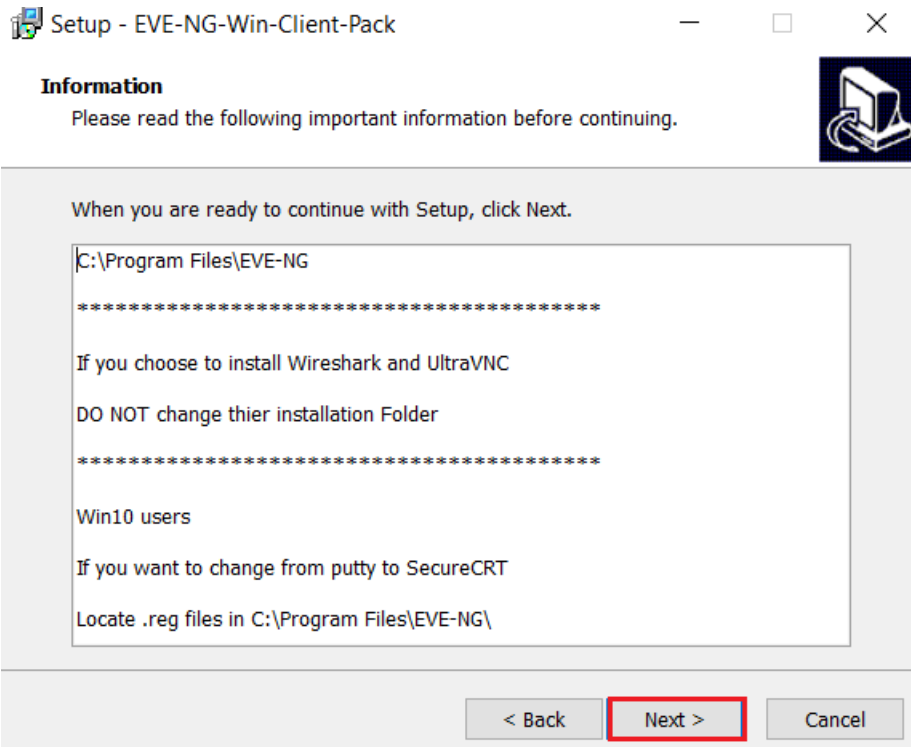

- Wireshark 3.0.6.0 installation
- UltraVNC 1.2.3.1 installation
- putty 0.73 (used as default telnet client)
- plink 0.73 (for wireshark)
- all necessary wrappers
- It will modify windows registry files for proper work
- It will save all the files on the local PC if one would like to modify for example, using SecureCRT instead of default Putty.
- Windows 8 and 10 reg files to support tabbed SecureCRT
- Auto detection of Windows version (7, 8, 10) ( x64 only supported )

- [Windows integration pack mirror](#)

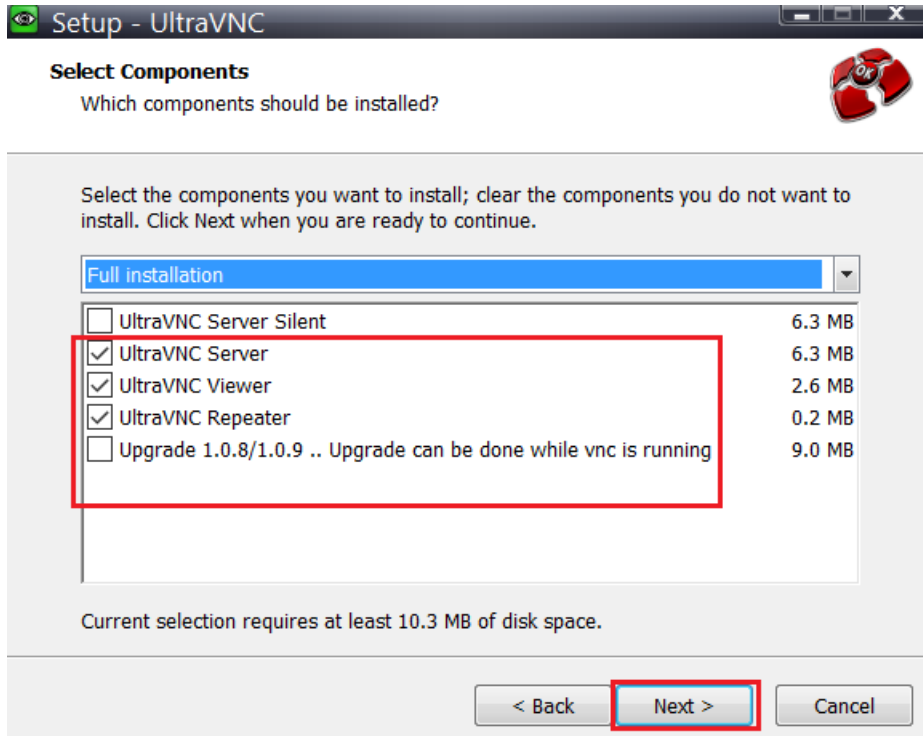

Run the installer. You do not need to install Wireshark or UltraVNC if you already installed.

Even if you chose to install UltraVNC, only Viewer is required. By default, 3 components (Server, Viewer, Repeater) are checked for installation. You can uncheck the other two.

Once the installation is completed, the wrapper scripts are installed in **C:\Program Files\EVE-NG** as shown below.
