

# Perform Vulnerability Scanning using Nessus

***ILABS***  
***CEH PRACTICAL***

@mmar

**Nessus is an assessment solution for identifying vulnerabilities, configuration issues, and malware, which can be used to penetrate networks. It performs vulnerability, configuration, and compliance assessment. It supports various technologies such as OSes, network devices, hypervisors, databases, tablets/phones, web servers, and critical infrastructure**

## Aim

In this task, we will use Nessus to perform vulnerability scanning on the target system
