

## CodeLite Configuration Updates

CodeLite has slightly changed its configuration process in recent releases.

When you select the CodeLite Setup Wizard now executes, you will be prompted for a 'Development Profile'. Please select the **C/C++ development** option and press **Next**.

This will automatically setup the correct C++ plugins and we do not have to set them up manually as in the installation video.

Note: this is current as of CodeLite 12.0.0.

Best regards,  
Frank Mitropoulos
