

Beginning C++ Programming Introduction to STL Algorithms

In the slide beginning at about 7:02 in the video, there is a typo (missing open curly brace) in the struct `operator()` function.

The line should read:

```
struct Square_Functor {  
    void operator() (int x) {          // overload operator  
        std::cout < x * x << " ";  
    }  
};
```

Thanks to Michael for pointing that out.
