

# Platform and Infrastructure Security for CCSP®

---

Primary Cloud Platform and Infrastructure Services

**Dr. Lyron H. Andrews**

CISSP/CCSP/SSCP/CRISC/CISM/CCSK

[www.linkedin.com/in/drlyronhandrews/](http://www.linkedin.com/in/drlyronhandrews/)

# Overview

**Enumerate the primary services of cloud computing and use**

**Analyze risks associated with cloud platform and infrastructure**

**Discuss mitigation strategies to reduce risks to cloud computing**

# CCSP Certification Examination

Domains	Weights
1. Cloud Concepts, Architecture and Design	17%
2. Cloud Data Security	20%
3. Cloud Platform and Infrastructure Security	17%
4. Cloud Application Security	17%
5. Cloud Security Operations	16%
6. Legal, Risk and Compliance 13%	13%

# Cloud Service Descriptions

---

## BRRROM

“Cloud computing is a model for enabling ubiquitous, convenient, on-demand network access to a shared pool of configurable computing resources (e.g., networks, servers, storage, applications, and services) that can be rapidly provisioned and released with minimal management effort or service provider interaction.”

-NIST SP-800-145

“ (e.g., networks, servers, storage, applications, and services)”  
-NIST SP-800-145

# Primary Cloud Services

**Network**

**Compute**

**Storage**

**Virtualization**

**Management Plane**

# Virtualization

---

# Capabilities of Virtualization

**Allows for resource pooling of storage, compute, and networking**

**Allow provider to share underlying resources with multiple tenants**

**The key virtualization mechanism in cloud is the hypervisor**

# Two Types of Hypervisor

## Type II

OS or hosted application hypervisor

## Type I

Modern cloud hypervisor

# Type I Hypervisor

**Bare-metal, embedded,  
or native**

**Work directly on  
hardware**

**Small form factor; few  
hundred megabytes**

# Type I Hypervisor (Continued)

**Traditional OS**

**Type I Hypervisor**

# Software Defined Network and Network Function Virtualization

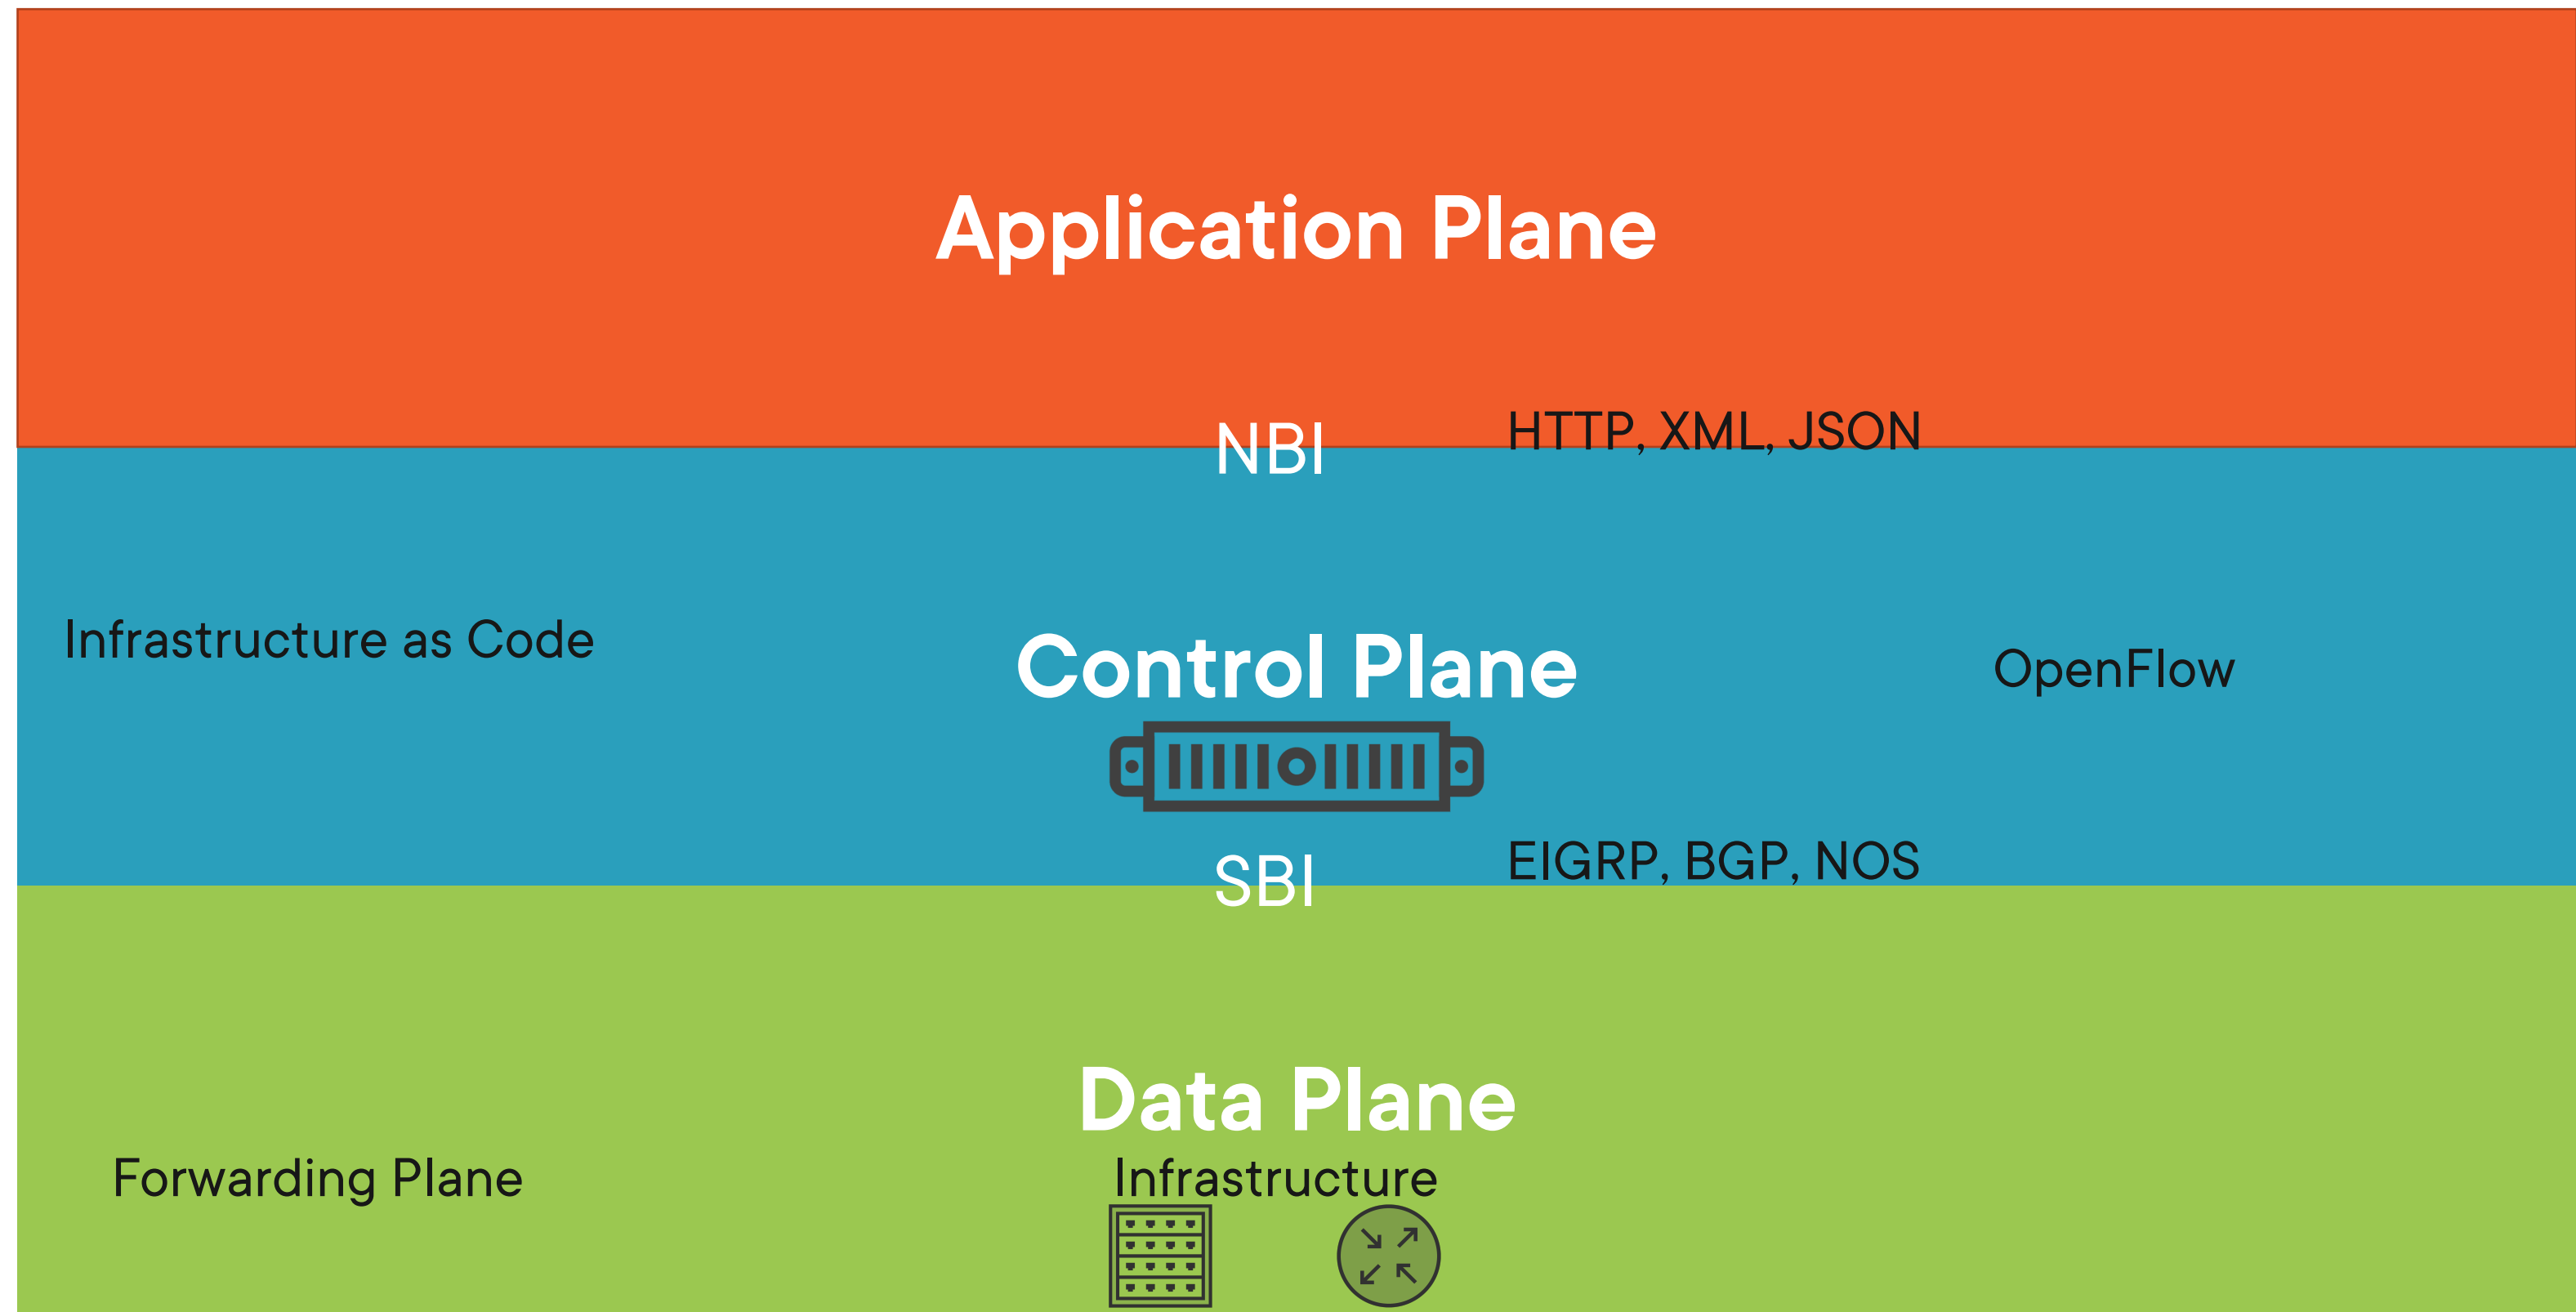

---

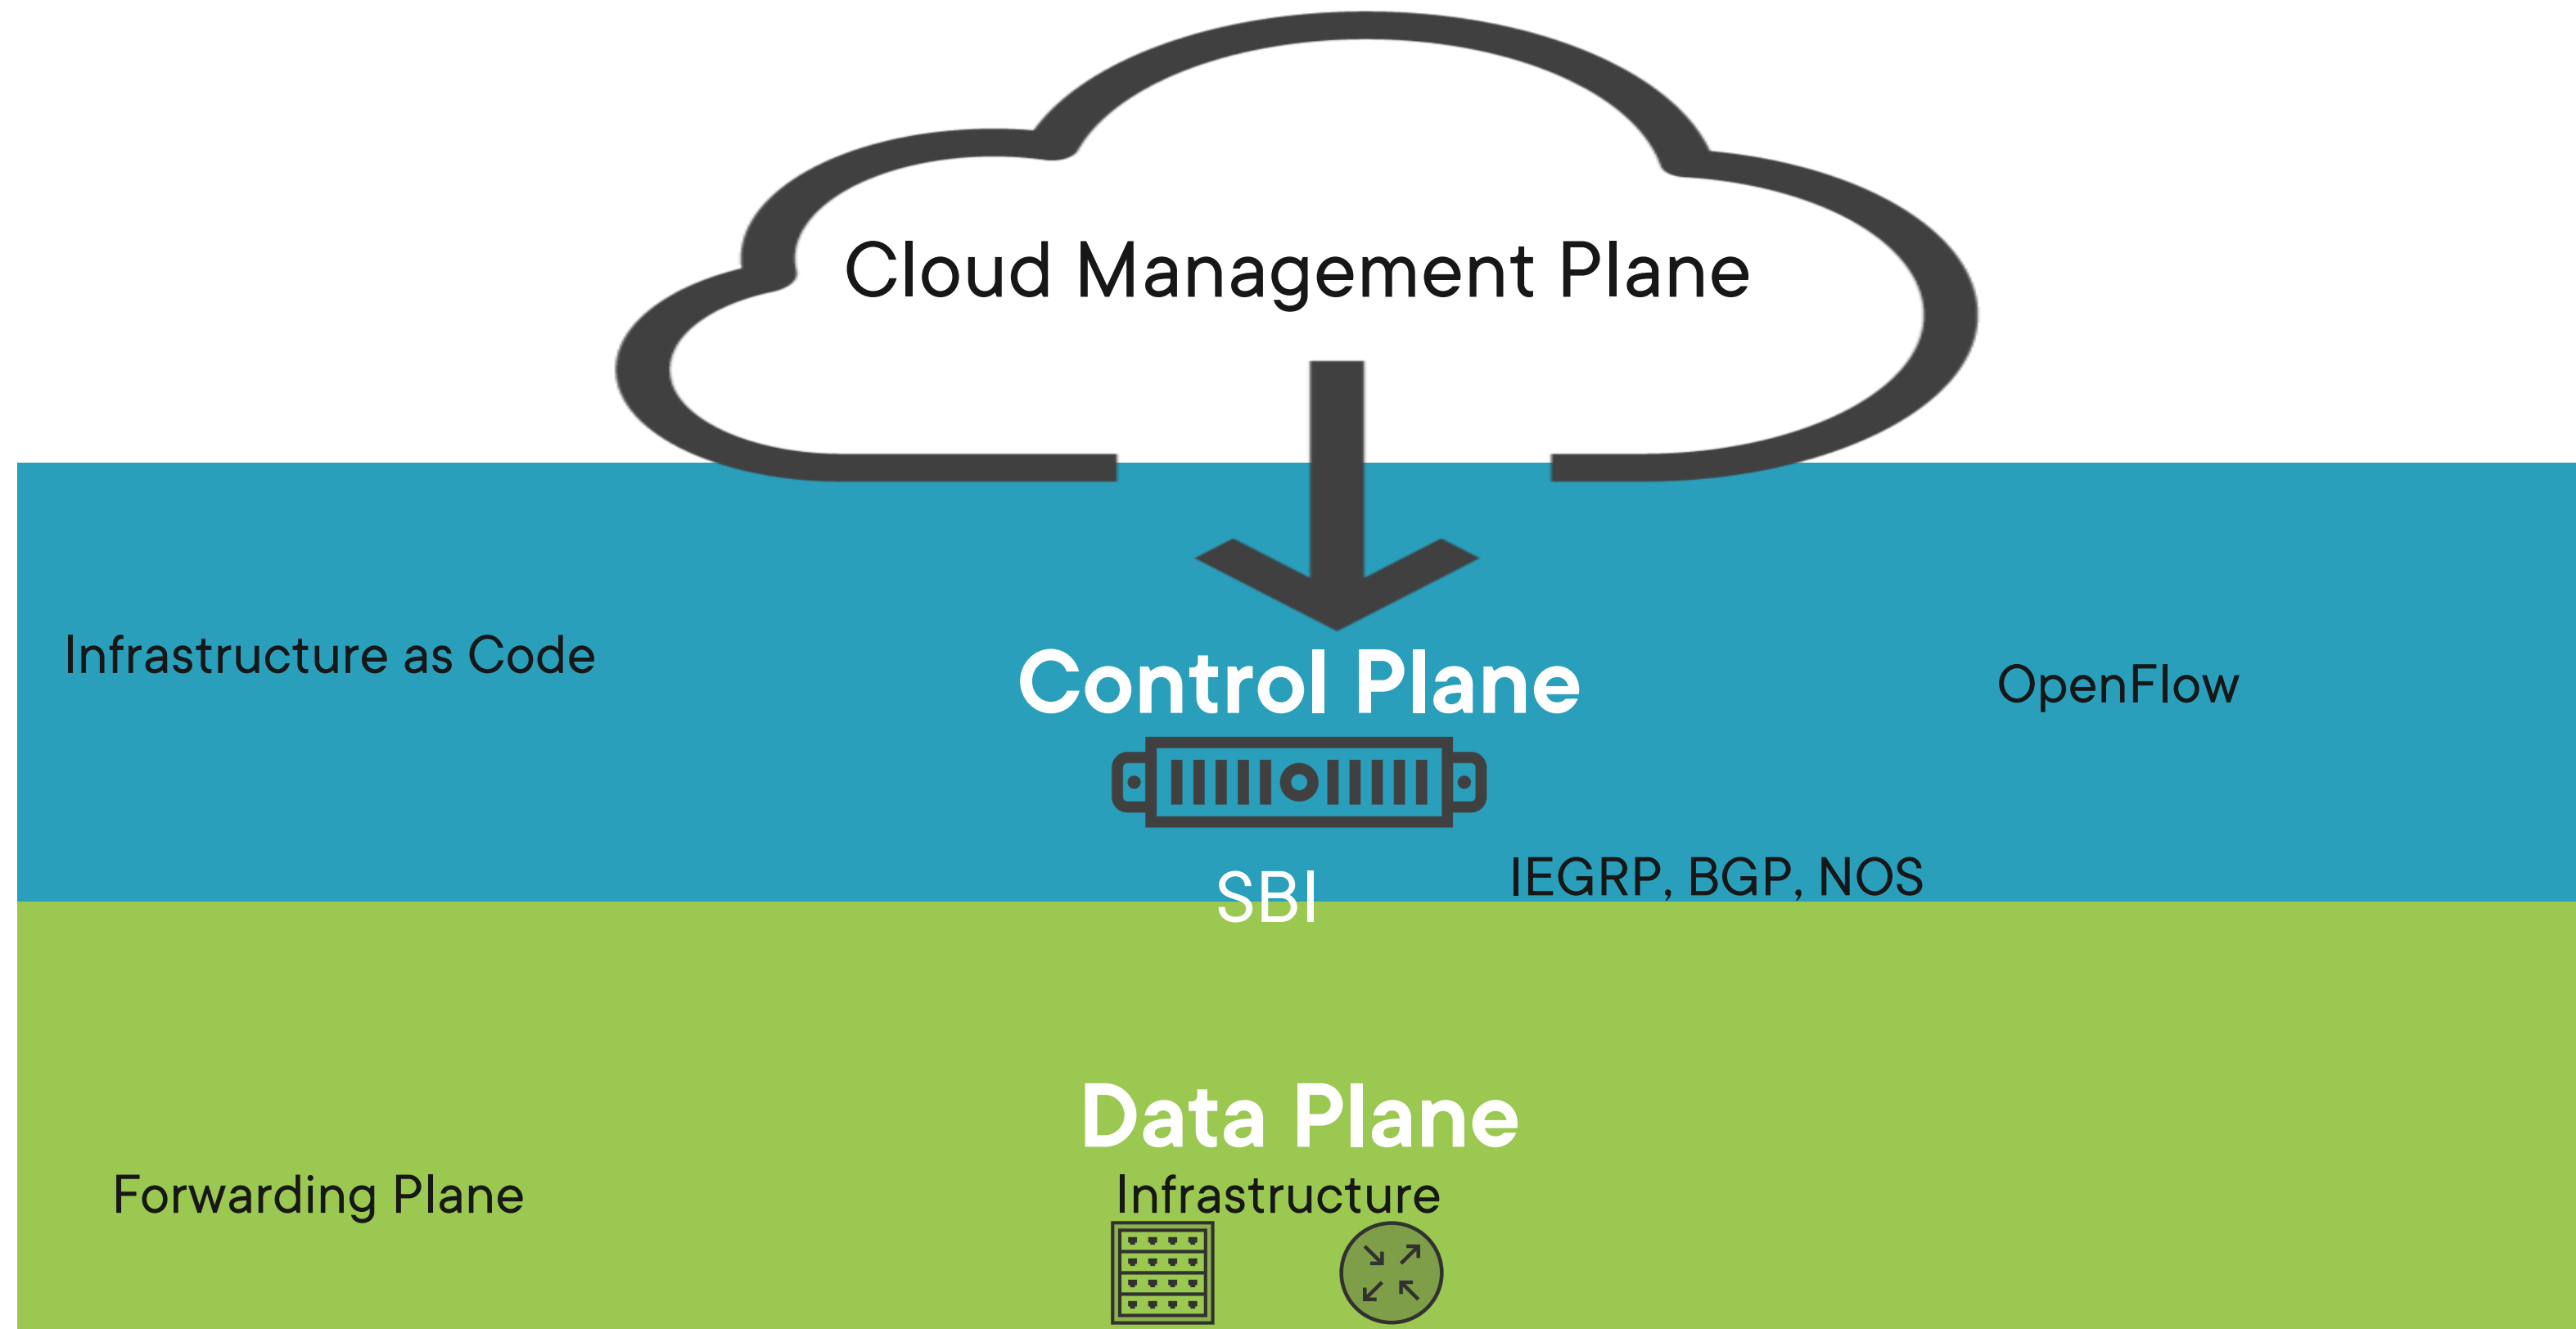

SDN did not begin with what is  
now considered NFV.  
Implementations of SDN are  
replacing MPLS.

# Step 2: Choose an Instance Type

Amazon EC2 provides a wide selection of instance types optimized to fit different use cases. Instances are virtual servers that can run applications. They have varying combinations of CPU, memory, storage, and networking capacity, and give you the flexibility to choose the appropriate mix of resources for your applications. [Learn more](#) about instance types and how they can meet your computing needs.

Filter by:

# SaaS, PaaS, and IaaS Risks

**Unauthorized workloads initiated**

**East-West movement of APTs**

**Improperly trained staff**

**Application built without security-by-design**

**Insufficient due-diligence and inadequate  
granularity of controls**

**Shadow IT**

“86% of the compromised Google Cloud instances were used to perform cryptocurrency mining, a cloud resource-intensive for-profit activity. Malicious actors gained access to the Google Cloud instances by taking advantage of poor customer security practices or vulnerable third-party software in nearly 75% of all cases”.

Google-Cloud Threat Intelligence, November 2021. Issue 1

Reduce blast radius of attack by means of implementing zero trust architecture. This includes explicit allowance to resources, micro-segmentation, and telemetry monitoring.

# Zero – Trust Cloud Architecture

---

# Five Steps to Zero Trust

**Define  
protect  
surface**

**Map  
transaction  
flows**

**Architect Zero  
Trust Network**

**Create Zero Trust  
policy**

**Monitor and  
maintain network**

# 1 - Define Protect Surface

**Data – Protected information through regulation and law**

**Applications – developed and acquired**

**Assets – systems under management**

**Services – connectivity protocols**

## 2 - Map Transaction Flows

**Determine the critical path of DAAS**

**Acceptable to begin with approximation**

**Iteration brings more clarity and granularity**

# 3 - Architect Zero Trust Network

**Reference architecture bespoke for business**

**Granular layer 7 protect surface**

**Application, user, and content ID management**

***“I keep six honest serving-men  
(They taught me all I knew);  
Their names are What and Why and When  
And How and Where and Who.***

Rudyard Kipling

*Just So Stories*, 1902

# 4 - Zero Trust Policy

**WHO is  
asserted  
ID?**

**WHAT is accessed on  
protect surface?**

**WHEN is asserted ID  
accessing?**

**WHERE is  
destination?**

**WHY is asserted ID  
attempting access?**

**HOW is asserted  
ID accessing?**

# 5 - Monitor and Maintain

**Continue to analyze and evaluate logs**

**More telemetry data better than less**

**Promote and investigate User/Entity Behavior Analytics (UBEA)**

## Summary

**Can you describe the separation in capabilities between traditional and cloud computing?**

**What risks to cloud computing is most important for you to begin mitigating?**

**Where on the journey to zero-trust are you?**
