

## Robust Backup Strategy Checklist

1. Whether there is a real-time offsite backup	<input type="checkbox"/>
2. Whether the backups are scheduled consistently to save data based on a user's requirements	<input type="checkbox"/>
3. Whether the notifications provide daily status updates on a backup situation	<input type="checkbox"/>
4. Whether the organization has unlimited space available to backup large amounts of data	<input type="checkbox"/>
5. Whether the data is available at any time to ensure the retrieval and recovery of lost data	<input type="checkbox"/>
6. Whether there is a mandate from backup provider that guarantees data safety	<input type="checkbox"/>
7. Whether there is a strategy for encrypting transmitted data	<input type="checkbox"/>
8. Whether there is a usage of multiple media for creating a backup to add cohesion in the overall backup strategy	<input type="checkbox"/>
9. Whether the organization is using multiple backup methods such as external hard drives, etc.	<input type="checkbox"/>
10. Whether the organization is storing backups in multiple locations such as on-site or off-site	<input type="checkbox"/>
11. Whether the organization is having physical isolation between their backup copies to avoid data loss	<input type="checkbox"/>
12. Whether the organization has increased the backup frequency to perform multiple backups in a day	<input type="checkbox"/>
13. Whether the organization has automated the use of disaster recovery runbooks to ensure appropriate recovery at the time of major security incidents	<input type="checkbox"/>
14. Whether a good retention plan is implemented to manage space and reduce backup costs	<input type="checkbox"/>
15. Whether the backup files are easily accessible in case of emergency	<input type="checkbox"/>
