*Terraform: Terraform Project Structure*

## *Terraform : Deployment Automation*

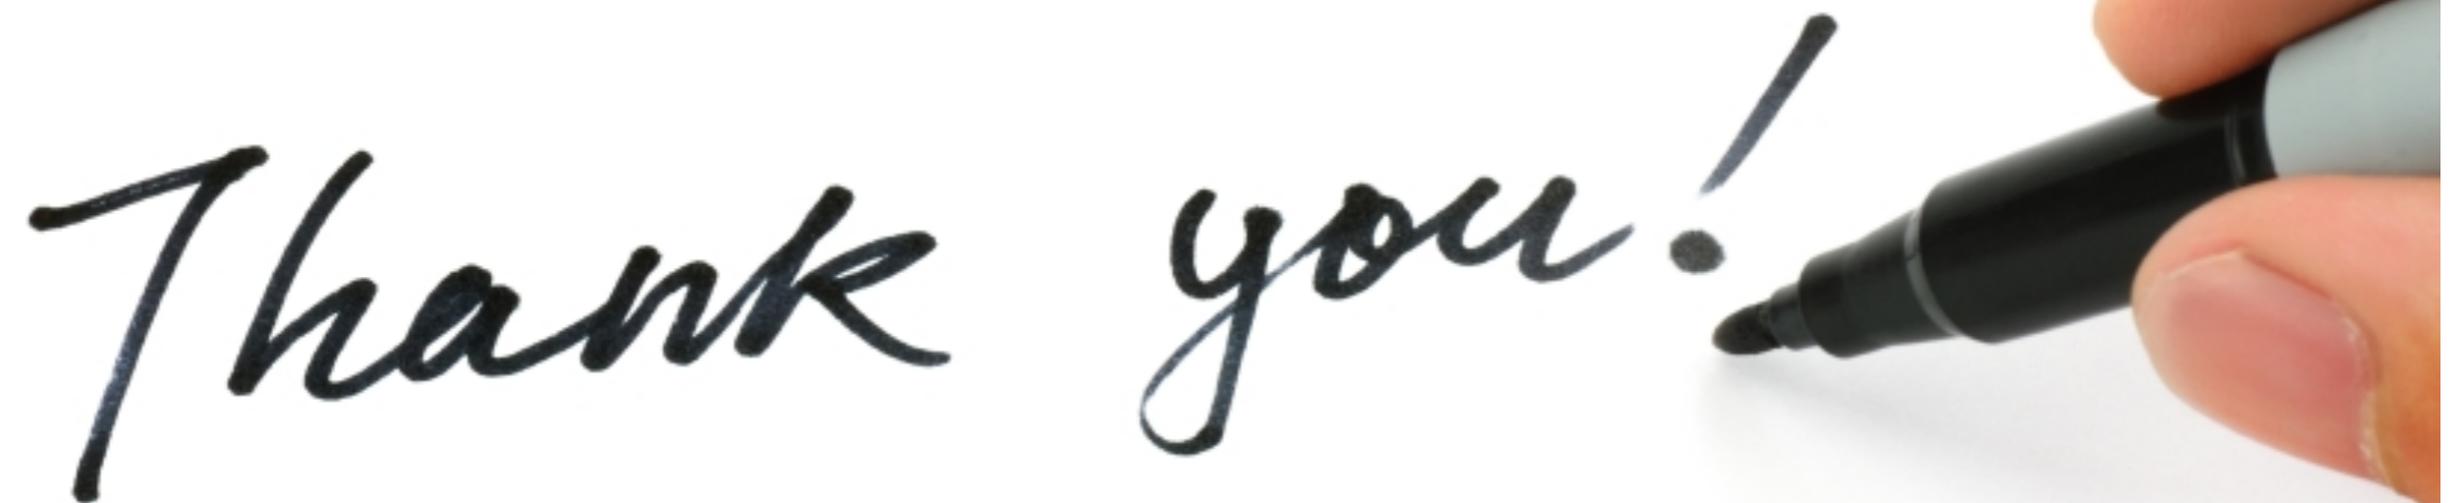

---

- When you start Terraform on Production, you need a **good Project Structure**.
- Terraform **Code Modules** are necessary in Production Projects.
- Ideally there should be separate environment for **Development, Staging and Production**.
- That will help, to avoid the errors in **Production**.
- For better isolation, it's best to create **Separate Cloud Accounts** for each Environment.
- Split the Terraform in multiple Services and Directories.

*Will see you in Next Lecture...*

---

*Thank you!*

A close-up photograph of a hand holding a black marker, writing the words 'Thank you!' in a cursive script on a white surface. The hand is positioned on the right side of the frame, with the marker tip touching the paper. The background is plain white.

*See you in next lecture ...*
