

TASKS TO COMPLETE

Web Panel To-do list #3

- Create a login page.
 - Use HTML forms, \$_POST global variable of PHP and MySQL prepared statements of PHP.

Steps to do

1. Create a HTML form for taking username and password input.
2. Process given inputs with \$_POST global variable.
3. Send a query to database to check if user is exists or not.
4. If the given username and password matches with database records, start a session and redirect user to index.php page.
5. Otherwise, throw out an error message.

If you are new to this concepts, learn more about HTML forms and \$_POST global variable and MySQL Prepared statements of PHP before keeping continue.
