

# TASKS TO COMPLETE

---

## Web Panel To-do list #5

- Create a session control mechanism.
  - If the `$_SESSION["username"]` value has not been set, kill the page and redirect user to login page.
  - Use `session_destroy()`, `die()` and `header()` functions.
  - Include the session control mechanism to all pages needed to be protected.

*If you are new to this concepts, learn more about PHP session mechanisms and `session_destroy`, `die` and `header` functions.*
