

Interacting with DNS Servers using DNSPython

Sean Wilkins

Network Engineer & Author

swilkins@infodispersion.com

www.infodispersion.com

Module Introduction

**Moving On from:
Using Python to Interact with
MySQL**

**Focus on using DNSPython
module to collect information**

Overview

- **DNSPython module review**
- **Concepts Demonstration - DNSPython**

This module will be focused on
accessing records stored
within a DNS network

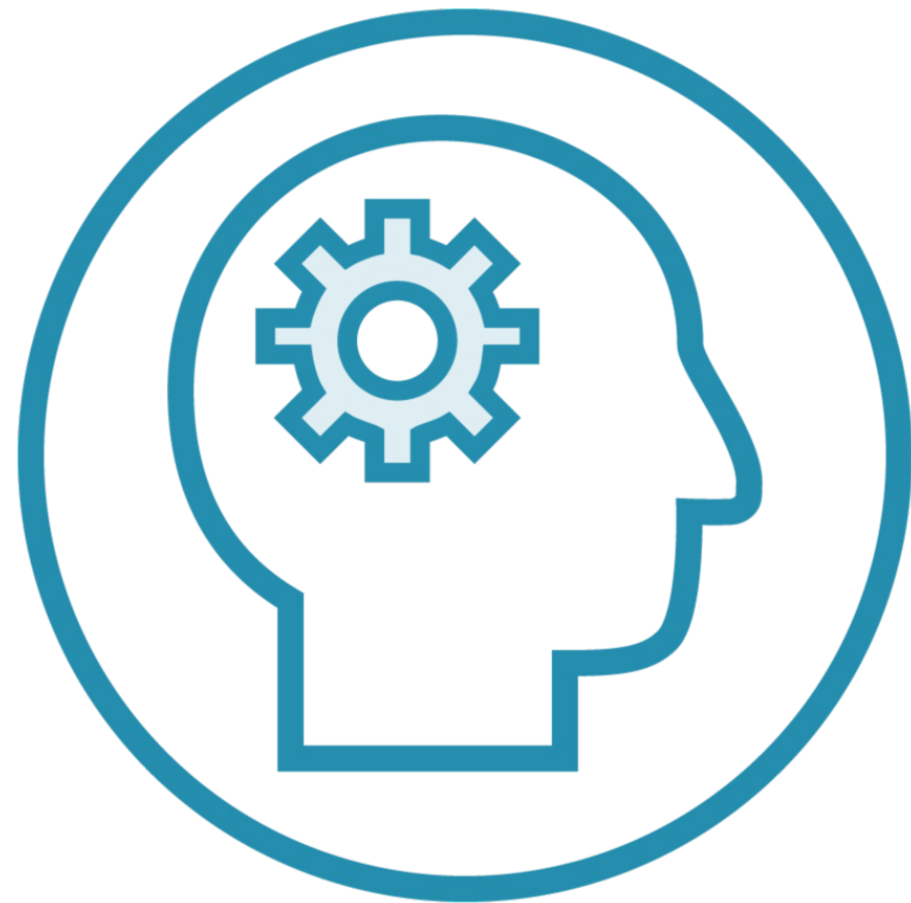

DNSPython Module

Quite extensive

**Supports most
topics DNS related**

**Focus on
collecting
information about
targeted DNS
names/domains**

Need to have the dnspython module installed

Use `python -m pip install` command

Quick installation

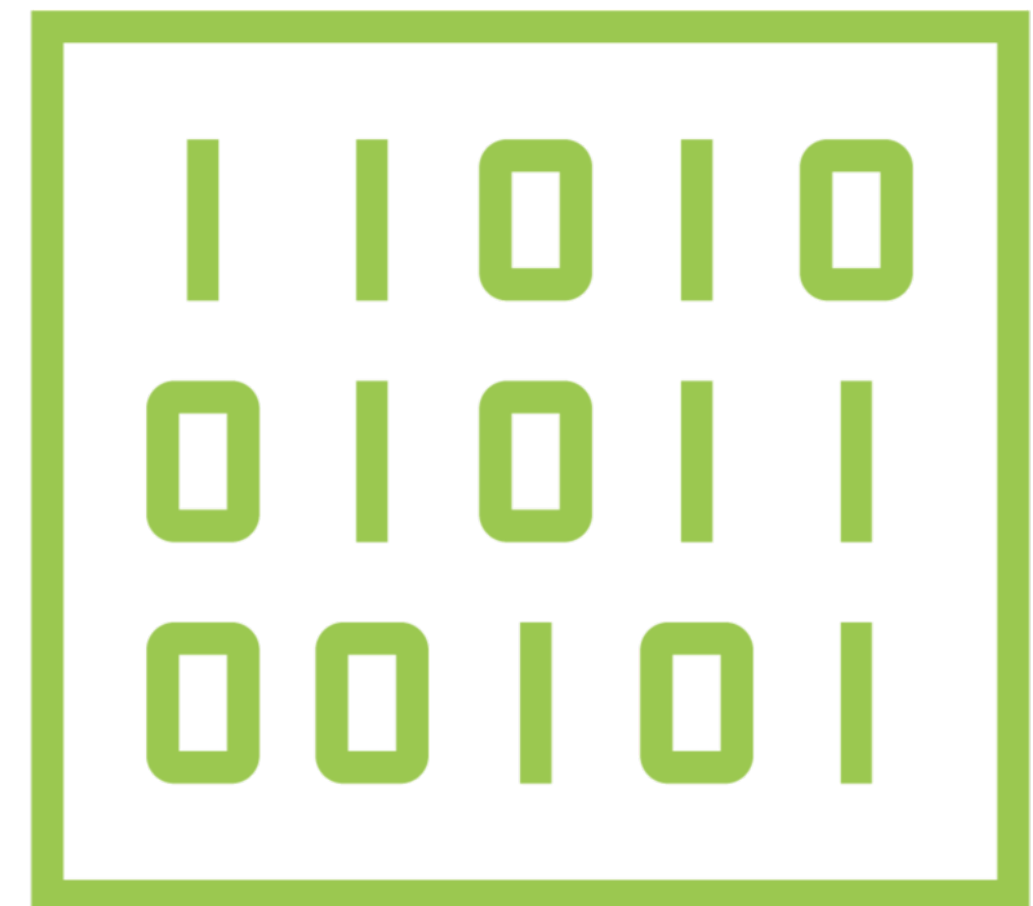

DNSPython Module

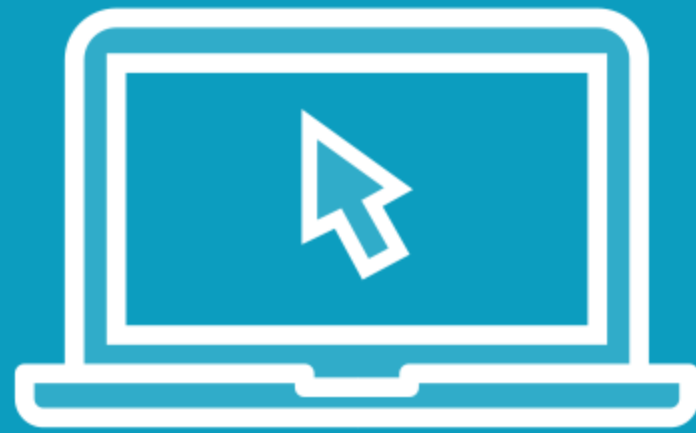

Can perform standard DNS queries on
names

Retrieves different types of DNS records

`dns.resolver.Resolver` class

Demo

Show how to interact with DNS server

Including:

- Initial connection
- DNS record type examples
- Reviewing DNSPython methods

Summary

- **DNSPython module review**
- **Concepts Demonstration - DNSPython**
