## Introduction

Greetings!

First of all, let me say that I'm really glad you decided to buy this detailed book about spreading – the ultimate way.

This is the first eBook, about spreading, which is so in-depth and detailed, and I'm sure you will be able to get at least **150 bots** in your first day (Yes, only 150, because you have to keep spreading to get the hang of it). This method is the one **I use personally**, and get about 600 – 1000 downloads per 3 days!

I will show you step by step how to make a **popular** torrent, and where to upload it first, then when it becomes a bit more popular (when you have some seeds) what to do with it, and how to make it trusted on popular torrent sites like ThePirateBay. And the beauty of this eBook is that I am doing everything in these steps as I write this very sentence you are reading, so I will provide screenshots and other stuff to make this as easy as possible. I started writing this eBook from the moment I began to set-up a torrent for DDoSeR 3.6

All the secrets of spreading, is revealed in this book!

After reading this eBook I guarantee you that you will have your own update / install service or spreading service, and if you don't have that, you are already too busy watching your downloads increase hour by hour.

So let's cut the talking and start to spread!

## Getting started

Ok, as you may have guessed, we need a torrent client. A popular and easy to use one is  $\mu$ Torrent. You can download it from: <http://www.utorrent.com>. Or you can use your favorite torrent client, but this tutorial I will be using  $\mu$ Torrent.

When you have downloaded  $\mu$ Torrent, you are ready to go. First of all, we need a popular program, hopefully includes a patch / key generator (to bind our file with). There is many ways to find a popular program, but the most common one is "top 100" at ThePirateBay (<http://www.thepiratebay.org/top/300>). If you have a fast upload speed, you can try big torrents (which make the torrent look more legit), and if you have a slow connection with a slow upload speed, try some smaller torrents, or consider buying a seedbox, which is pretty cheap these days.

Put yourself in the downloader's shoes when it comes to spreading, would you download a Photoshop crack at **45 kB**, with no PE info, no leechers/seeds and the default .exe icon? The answer is no, you would be afraid, because it looks really suspicious. But if it was a **372 megabyte** Photoshop installer (I like to include a installer for the program I am making the torrent for, it looks more legit, and I have tried to make a torrent with the same crack, just that I excluded the installer, and got 460 more install because of the installer, so the installer plays a big role) + a crack with some nice icon and info about the creator (PE Info) I would run it (remember, think as the downloader's, always!)

Now let's move on to the tips & secrets.

## T ips & Secrets

People think that you can get thousands of downloads just by uploading, and watching your downloads increase, this is all **wrong**. This method has been tested, and gives the best results:

1. Set up a stealer (iStealer 5.0, Stupid Stealer... you get it, there are many) and download it on your bots. Check your logs and try to find any torrent sites (Demonoid, ThePirateBay...) and use their account to upload your torrent. This is how I got about 2k downloads on Demonoid: I bought a Demonoid account from a log seller, and it had a pretty good ratio on it, and I used it to upload a torrent (I only had 1 account). Then I started to get many downloads, and I ran my stealer on them, and had about 14 Demonoid accounts, and I used all those accounts to comment on the original torrent, with comments like "Thanks man, scanned & 100% clean" etc... Then I got many more downloads, and used the other accounts to comment, and ended up with 64 comments, and 2k downloads. (The torrent is still alive today, on Demonoid, and hopefully it won't get reported 😊)
2. The secrets of a successful torrent: Your files must **always** be larger than 30 megabytes, for 2 reasons:
  - There is always at least one guy that uploads your file to virustotal. And virustotal distribute your sample to antivirus companies and get it detected faster. But if your file is 30 megabyte, then they won't be able to upload it to virustotal due to the upload limit (20 megabyte)
  - And there will always be at least one smart guy that will look for outgoing connections or such, so you need more time to get leechers, so make it not too big, and not too small. 30 megabyte is always enough.
3. You need history, for successful torrents, so upload a few eBooks and movies on your account before uploading your programs.
4. The .exe extension is sometimes not suit for the torrent; let's say you want to send to somebody as a "picture". An executable will be just dumb to send, so you can rename it to something.scr. Scr stands for screensaver, and functions the same way as an .exe

but is less suspicious.

FAIL!

## Choosing your target audience

In the previous chapter I used the “top 100” to choose a torrent, because usually those will get you the most downloads. But let’s say you want a specific target (ex. Call of Duty 6 players) then we have to use other methods. Since you want the steams, you need to make the target audience steam players with Call of Duty Modern Warfare 2 on it. This is actually really easy, but most people think it’s hard.

So how can we make people with steam download it? Easy. Just find something steam users would download, once again, think as the downloader’s! Try stuff like “Steam Cracked Client – All Games!”, or something like “VIP Call of Duty Aimbot” etc...

Torrents are not really good in this part (small programs), for this you can use YouTube, it is a really good place to spread if you get a lot of views and ratings. Make some videos about your hack and put many tags (keywords) and I guarantee you that you will get at least **5 steams** if not a lot more.

Think creative, what does your targets like? What would they download? Why would they download?

Another example: You want from the age 15-17, what does this age like? Games maybe... I’ve seen a lot of 15 year old people play runescape so I can make a fake runescape bot or something in that direction. Then make a lot of videos of it, and use the same tips I gave for the torrents. Get others YouTube account, comment/rate/subscribe yourself and then you get more accounts and repeat the process.

## Downloading, crypting, binding, and making the torrent

Now, as you have found the program you want to use for your torrent, download it. For this tutorial, I am going to use this one:

AVG Anti-Virus Professional 9.0 Build 663a1706 + Keygen [RH] 952 45  
RobbingHood

It has 952 seeders, and 45 leechers, which is a really good (and popular) torrent. Why I chose this torrent have its reasons:

- It is an antivirus program, so the target audience probably doesn't have an antivirus installed.
- It has a key generator included, which is also good for us, so we can bind it.

**T ip:** I usually bind my program with the installer too, so if somebody for some reason just downloads it for the installer, will get your program too.

Now I have downloaded the torrent, let 's do the crypting & binding.

This is what I got so far, 5 files: installer, key generator, readme, screenshot of key generator, and finally our program. What we want to do is bind the key generator with our program. For this you have to use a crypter with built-in binder, or a crypter and a binder. There is a good and free one called Fly Crypter by BUNNN, you can get it from <http://hackhound.org/forum/index.php?topic=13513.0> but you have to decrypt it though. Now I am binding and crypting it using Fly Crypter:

Name	Path	Execution	Inject/Drop to	Command Line	Delay	Size
AVG9_Ke...	C:\Users\DYAR\Desktop\	Inject file	This exe	-	0	317 KB
bin.exe	C:\Users\DYAR\Desktop\	Inject file	This exe	-	0	127 KB

Now I put everything back in their original folders, like it was when I downloaded it.  
Open up  $\mu$ Torrent, and click the magic wand tool:

Click Add Directory (or file, if you use a zip archive) and browse to your file/folder. Put in the trackers you want to use (a tracker list go to: <http://pastebin.mozilla.org/697683>) and check "Start seeding", as below:

Now after you have saved your torrent, you should have something like this:

AVG Anti-Virus Professional 9.0 Build 663a1706	*	90.1 MB	100.0%	Seeding	0 (1)	0 (0)
--	---	---------	--------	---------	-------	-------

## Uploading your torrent

Now, you have your files & torrent ready. This part is the most important part, which many people do mistakes on, uploading your torrent. Most people make a torrent and upload straight to the popular torrent websites like ThePirateBay or Demonoid, but this is the worst thing you can do! First of all, you will get **very** few downloads, and the second; you will be banned extremely fast.

Here is the **right** way to do it:

First of all, begin to upload your torrent straight to those sites:

<http://www.seedpeer.com/upload.html>

<http://www.btjunkie.org/?do=upload>

<http://www.bitenova.nl/upload>

<http://www.fulldls.com/upload-torrent.php>

<http://torrents.sumotorrent.com/upload.php>

Now wait for your torrent to get about 5 seeds, and hopefully 10 leechers. (Actually 3 seeds are enough, just a number of seeds are ok, and so people don't see "Seeds: 0")

Then upload it to those sites (requires registration):

<http://www.torrentreactor.to/torrents/add>

<http://www.torrentportal.com/torrents-upload.php>

Then hopefully you have 10 seeds by then, and upload to:

<http://www.torrentdownloads.net/upload/>

<http://www.torrentmatrix.com/torrents-upload.php>

Then when you have a bunch of seeds, upload to:

<http://torrentbox.com/torrents-add.php>

Now, what you have to do is just wait, our goal is 30 seeds and 30/40 leechers. Then upload to Demonoid and ThePirateBay after a few hours. But check the Tips & Secrets chapter for the ultimate way to spread on those 2 popular sites. You are saving the best last!

## Conclusion

It's time to finish this book, so all I have to say is good luck, and have a happy spreading! You will find this book really helpful when you are sitting there, staring at your torrent with 1 seed and 0 leechers 😊. Using the information provided within this book will guarantee you that you will become a professional spreader in no time. So what are you waiting for? If you begin faster, you finish faster, and practice makes master.

Happy spreading.

FINAL!

# THE END

Now go spread your torrent! :-)
